Corporate Overview

S2|DATA, founded in 2013 by industry veterans Brendan Sullivan and Shawn Strickler, has established itself as a leader in the fields of eDiscovery, digital forensics, and data recovery. Our unmatched expertise and innovation in these areas have set the industry standard. We turn the most complex data challenges into opportunities by addressing them with intelligence, efficiency, and the highest levels of security.

S2|DATA provides a comprehensive, end-to-end solution that ensures important data is not only retrieved or recovered; it is also managed to eliminate unnecessary or obsolete ROT data (Risky, Obsolete, or Trivial). Properly managing ROT data is essential to reducing storage costs, enhancing data security, and ensuring compliance with regulations like GDPR, PIPEDA, HIPAA, and CCPA and protected in a way that meets the most stringent legal and compliance standards.

With multiple team members with over 30 years of experience in data recovery, our team possesses an unparalleled understanding of the diverse environments in which data is created, enabling us to extract vital information from legacy and current backup environments like no one else. Whether your needs are driven by regulatory requirements, litigation, compliance, or cost reduction, our specialized approach ensures that we consistently deliver intelligent, efficient, and secure solutions tailored to your unique needs and timeframes.

At the heart of our capabilities is a suite of proprietary tools, including TRACS ®, LEARai ®, MEAD ®, and Invenire®; as well as industry-leading tools, including those from X-Ways, Cellebrite, and Magnet. These powerful technologies enable us to provide our clients with unmatched access, structure, and insight into their legacy data, while our eDiscovery and Forensic services ensure defensibility and regulatory compliance in even the most complex cases.

Digital Forensics

Our S2|DATA forensic team is built on a foundation of security, expertise, and reliability, ensuring that every aspect of digital data recovery is handled with the utmost precision and care. Our certified forensic experts manage the entire process—from identification and acquisition to preservation, analysis, and documentation—ensuring that electronically stored information (ESI) is carefully collected, processed and produced for your specific needs.

S2|DATA's state-of-the-art techniques and industry standard tools are designed to preserve the integrity of sensitive digital information, ensuring its defensibility in legal or regulatory matters.

S2|DATA offers both onsite and remote data collections worldwide improving the efficiency and accuracy of investigations while ensuring secure and reliable data capture no matter the location. We specialize in employee offboarding and other sensitive data management tasks, delivering a seamless experience while prioritizing security and confidentiality.

eDiscovery Services

With a combined 54 years of experience and eDiscovery subject matter expertise, the S2|DATA team is comprised of industry experts specializing in delivering white-glove service for a range of legal and litigation support services. We are committed to providing exceptional solutions tailored to your needs, ensuring efficiency and accuracy at every step.

At S2|DATA, we pride ourselves on delivering reliable, detail-oriented, and cost-effective solutions, backed by decades of industry experience. Our goal is to provide exceptional service with a focus on quality, transparency, and client satisfaction.

Backed Up Data Services

Our team possesses an unparalleled understanding of the diverse environments in which data is created, enabling us to extract vital information from legacy backup environments like no one else. Whether your needs are driven by regulatory requirements, litigation, or compliance, our specialized approach ensures that we consistently deliver intelligent, efficient, and secure solutions tailored to your unique needs and timeframes.

Restoring data from backups on tape or disk demands a significant level of expertise in backup software, tape formats, and the underlying application data. With over 30 years of experience, our engineers have honed a deep mastery of these critical skills, and written proprietary software that allows us to read, catalog, and search most common backup formats without using the software that created them. We continue to innovate and advance this software to support even the latest technologies.

S2|DATA also offers the fastest, most comprehensive, and most reliable restoration of the data found in voice logger systems. Leveraging the expertise honed while conducting our backup restoration services, our voice logger restoration service ensures that your voice records are recovered accurately, efficiently, and without compromise.

Restore Any Media, from Any Format, Anywhere in the World.

Our unrivaled capabilities make us the go-to partner for any organization facing the need to recover critical data from backup tapes or voice logger systems—regardless of format, location, or complexity. With S2|DATA, you're assured of expertise, reliability, and the fastest resolution in the industry.
