

Off-Site Data Storage

The HAVs – High Availability Vault

S2|DATA offers secure offsite storage for business critical data assets. Our two high-security former bank vaults, located in Atlanta, GA, on a 3-acre razor wire-protected campus, are built with steel and concrete.

We offer forensic and data restoration and processing services for the legal and compliance markets, following a set of processes to discover and produce data for litigation matters.

Many of our clients have found the solution to reducing data-related risks is to vault their data assets with S2|DATA. Knowing there may be discoveries in the future, and so removing the risks associated with transportation, logistics, storage and production is a top priority. With S2|DATA's High Availability Vault, storing and producing data in a single location outperforms any combination of separate vendors. This complete offering enables us to achieve a Faster Time to Data whilst Eliminating Cost & Risk.

S2|DATA Off-Site facilities offer secure, fully tracked storage for:

- Tape Cartridges - In Slotted Storage / Secure Containers / Bankers Boxes
- Hard Disk, SSD & Other Media – Internal / External / SSD / Thumbs / RAID Arrays
- Laptop / PC / Servers / Smartphones / Tablets
- Complete backup Infrastructure - Disaster Recovery Systems / Emulated Environments / VMs

S2|DATA Security features include:

- Isolation from any other business
- 9 feet razor wired perimeter with full cover CCTV
- Alarm System with Contracted Response
- 18" Concrete & Steel building with no windows
- Mosler Steel Vaults, secure 2 Key Lockboxes
- Biometric Access throughout
- Fire Station 100 yards from the operation
- ISO 27001 certified

We also offer onsite secure, certified, data destruction services for your permanently retired assets.
